Third-Party Product Accessibility Evaluation

Unbiased, expert evaluation of a vendor's software, product, or application's accessibility—before you buy.

ProcureEnsure.

Accessibility is a critical component of software and digital product procurement. Integrating a vendor's third-party software or product into your digital environment can compromise your organization's own accessibility and compliance requirements if that product doesn't conform with the Web Content Accessibility Guidelines (WCAG).

Allyant's ProcureEnsure service helps procurement professionals make informed buying decisions that will support legal compliance requirements.

Ensure usability for all.

Purchase products you're confident can be used by everyone—including people with disabilities who use assistive technology.

Secure accessibility standards.

Validate a product meets global accessibility standards as well as your own organizational standards.

Procure with risk in mind.

Make informed, risk-based procurement decisions that support—not compromise—your legal compliance efforts.

Two-Tiered Testing.

Our procurement review involves a manual evaluation as well as review conducted by native assistive technology users, and we can start with your vendor's VPAT / ACR if one is provided. Our report then makes it clear whether the third-party product meets global accessibility standards—and your procurement standards.

Make Purchasing Decisions with Confidence.

Let Allyant help you ensure every touchpoint of your digital experience meets your standards for accessibility and legal compliance, including products provided by a third party.

Simple. Seamless. Accessibility.
